

PROFESSIONAL EDUCATION

&

DEVELOPMENT

This document presents the professional education, certificates, courses, and specializations completed through internationally recognized technology and education providers.

The professional studies cover a broad range of fields, including artificial intelligence, generative AI, data analysis, cybersecurity, digital technologies, business intelligence, project management, digital marketing, cloud technologies, and other related fields.

These studies form part of my commitment to continuous, interdisciplinary learning and professional development, and complement my work as an independent researcher, as well as my work as the founder of the NVO987 association.
